HyperCard 1.2.2: Problem With SAM 1.0

This article last reviewed: 26 October 1989

TOPIC -----

I experienced a problem with HyperCard 1.2.2 and SAM v1 (Symantec AntiVirus for the Macintosh). When I launch an application from within HyperCard and quit the application with SAM installed, control returns to the Finder, not to HyperCard. I fixed the problem by removing SAM. Obviously, the problem does not occur under MultiFinder, because HyperCard stays open when launching another program. Although the problem was spotted under SAM v1, it also afflicts SAM v1.1.

DISCUSSION -----

The problem you describe is known to Symantec and is reported to be documented in the "Read Me" file distributed with SAM 1.1. The "Read Me" file contains information on other known problems and is considered good reading for all users of SAM.

Symantec indicated that this was something they wanted to fix in the next release of the product. No date is set for future releases of SAM.
