TOPIC ---

When I use the find command in HyperCard 1.2.5 to locate a string in a
specific field, I get matches in all fields. It works correctly in
HyperCard 2.0.

DISCUSSION --

The HyperCard 1.2.5 "Find" command is documented on pages 106 and 107 of the
"HyperCard Script Language Guide: The HyperTalk Language". Using the "Find"
command to search on a specific field works only for background fields. If
you do a search on a card field, the string will be found in all fields with
the text that matches the search criterion.

The find command is more flexible and powerful in HyperCard 2.0.
