## HyperCard 1.2.5: Multi-launching from a Server

Article Created: 12 April 1991

TOPIC -----------------------------------------------------------

Our school's Macintosh lab has an AppleShare server.  I want to set up a
single copy of HyperCard (1.2.5) with several stacks on the server, so that
it can be multi-launched.  The HyperCard stacks and applications on the
server are locked (Finder), and they do not have any problems.  Is there a
way to do it?

DISCUSSION ------------------------------------------------------

HyperCard can multi-launch on the server.  It works if HyperCard is either
locked or in a locked folder.  We experimented and got an error message by
unlocking HyperCard or by putting it in a write-enabled folder. Stacks work
the same way.
