HyperCard 2.0: Link to Problem on 68000-Based Systems

This article last reviewed: 13 November 1990

TOPIC -----

I'm having a problem with HyperCard 2.0. I get an ID=02 bomb when I do the following:

- Create a new stack.
- Create a new button.
- Use "Link to" to link the button to this card.
- Use "Link to" to link the button to this card.

It's the second LinkTo function that causes the bomb.

DISCUSSION -----

This is a known problem that seems to occur only on 68000-based Macintosh systems.

As a workaround, delete the line "go to card xxxx" from the button's script before modifying the link.
