HyperCard 2.0: Command-Option-S Key Problem

Article Created: 5 March 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

In HyperCard 2.0, the Command-Option-S key combination brings up a dialog box requesting the location of the System folder, rather than the stack script as expected.

DISCUSSION -----

Command-Option-S opens the script of the stack in use. This did not change in HyperCard 2.0. You might have a macro set up to do something different. In QuicKeys 2, Command-Option-S is set up as the start/stop sequence for macro recording. Make sure that nothing like this is in use and the problem should be eliminated.
