HyperCard 2.0v2, Oracle, and Home Stack Versions (7/92)

Article Created: 23 January 1991

Article Reviewed/Updated: 23 July 1992

TOPIC -----

The 2.0v.2 Home stack should be used with HyperCard 2.0v.2. The two must run hand-in-hand. Some of the bug fixes from 2.0v.1 to 2.0v.2 contained fixes to the application and the Home stack as well. The same is true of 2.1.

DISCUSSION -----

This may be a particular problem for Oracle users. Oracle is a mainframe database application that uses HyperCard as an interface or "front-end" for the Macintosh. Installation of the Oracle XCMDs modifies the Home stack.

Oracle users have reported that when they use the Home stack from an older version of HyperCard with HyperCard 2.0, their application slows down considerably.
