HyperCard 2.2 New Feature: Three New Button Styles (12/93)

Article Created: 13 December 1993

TOPIC -----

HyperCard 2.2 offers three new button styles: Default, Oval, and Standard.

DISCUSSION -----

- The Default button style is the same type you see for the OK button in most dialog boxes: it's outlined with both a thin (one-pixel) line, and with a thicker line (three pixels thick).
- The Standard style is a rounded rectangle without a shadow. It looks like a Cancel button: its outline is a single one-pixel line.
- The Oval button style is transparent. Use it to overlay circular or oval shapes. Although the boundary of an oval button is rectangular, HyperCard respects its oval shape when tracking the mouse for highlighting and for messages (mouseEnter, mouseWithin, mouseLeave) and mouse clicks.

A separate article describes another new button style: pop-up button.
