HyperCard 2.2: Requirements & Compatibility (12/93)

Article Created: 13 December 1993

Article Reviewed/Updated: 24 December 1993

TOPIC -----

HyperCard 2.2 is the third update to HyperCard version 2.0; it supersedes versions 2.0, 2.0v2, and 2.1.

This article, adapted from the HyperCard 2.2 "New Features" stack, lists basic HyperCard 2.2 information.

DISCUSSION -----

System Software Requirements

HyperCard 2.2 requires Macintosh System Software version 6.0.5 or later, or A/UX version 2.0 or later.

Using HyperCard 2.2 Stacks With Earlier HyperCard Versions

None of the new features of HyperCard 2.2 can work under earlier versions of HyperCard.

WARNING: If under versions of HyperCard earlier than 2.2 you compact a 2.2 stack that contains non-HyperTalk scripts, the non-HyperTalk scripts are likely to be deleted, causing the stacks to behave in unexpected ways.

OSA Compatibility

For features related to Apple Open Scripting Architecture (OSA), you'll need Macintosh System Software version 7.0 or later -- and the AppleScript extension.

AppleScript Requirements

For AppleScript-related functionality, you'll need:

- System Software 7.0 or later
- AppleScript 1.1

For component-related functionality, you'll need:

- QuickTime 1.6 or System Software 7.1

Article Change History:

24 December 1993 - deleted Apple Events Manager requirement,
revised "Earlier HyperCard Versions" section
