HyperCard 2.2: Close Script Ed Before Running OSA Script (12/93)

Article Created: 24 December 1993

TOPIC --

1) I put the following AppleScript script into a HyperCard button:

```
on mouseUp
  badNews()
end mouseUp
```

2) Click the button. HyperCard complains, 'Couldn't understand "badNews".'
   Click script in the complaint dialog. The script window opens. Leave the
   script window open.

3) Select the card window by clicking on it. Click the same button again as
   above.

4) HyperCard complains again. Click script again. The system eventually
   freezes or crashes.

DISCUSSION --

In a nutshell, HyperCard has problems if you run an AppleScript script with
a script error and then hit the script button in the resulting error dialog
while the corresponding script editor window is already open. If you run
into this problem, close the script editor windows before running OSA
scripts.
