HyperCard 2.2: Bad AppleScript Disks (5/94)

Article Created: 23 May 1994

TOPIC ---

When installing HyperCard 2.2, some users have reported problems with bad
"AppleScript" disks

DISCUSSION --

This may be due to the fact that customers are installing HyperCard 2.2 onto
Macintosh computers using System 6 systems. HyperCard 2.2 is compatible with
System 6.0.5 or later, but to use the AppleScript programming language with
HyperCard 2.2 a Macintosh computer must be configured with:
    - System 7.0 or 7.0.1 and QuickTime 1.6 or later, OR
    - System 7.1

Customers whose Macintosh computers are running System 6 will see an error
during a custom installation of AppleScript which says that the disk is bad.
This will not occur during an easy install.
