## HyperCard 2.2: Printing Disabled In Standalone App? (5/94)

Article Created: 23 May 1994

TOPIC -----

Why are 'Print Field,' 'Print Stack,' and 'Print Report' disabled in stand alone applications? Is there anyway to get these menu choices available in stand alone applications?

DISCUSSION -----

"Print Report" and "Print Stack" are options available under the "File" menu in HyperCard. In HyperCard Payer these items are still there but are grayed out because the XCDMs that perform these functions have been removed. Because of this, there is no way to access or modify a report template. Print Field is the only type of printing that the user can access directly.

Since standalones are basically stacks with the player engine embedded, they act the same way.

I have been able to print mail labels using  
"open report printing with template..."  
It works like a champ.
