## HyperCard: Compatibility with Icon Colorizer (7/92)

Article Created: 29 October 1990

Article Reviewed/Updated: 23 July 1992

TOPIC -----

Customers may have problems when they're running both Icon Colorizer INIT under System 6.0.x and HyperCard, while their monitor is set to color.

DISCUSSION -----

This combination may cause some icons in HyperCard to appear poorly. It appears that Icon Colorizer is attempting to colorize these icons, while HyperCard, being a black and white program, is not allowing this to happen. The icon which results is a black and white representation of a full color image, and it may therefore lose significant detail.
