## HyperCard Player: Standalone Application & VIREX 3.2 (8/93)

Article Created: 6 July 1993

Article Reviewed/Updated: 2 August 1993

TOPIC -----

Having VIREX 3.2 installed when trying to create a standalone application using the Embedding Tool (in the Player Tools stack which accompanies the HyperCard Developer's Licensing Kit) causes problems when opening the standalone.

DISCUSSION -----

The standalone application asks "Where is Home?" (the Home stack should actually be the embedded stack).

If there is a stack named "Home" in the same folder, the standalone will open that "Home" instead of showing the embedded stack.

SOLUTION: The problem did not occur using VIREX 3.9.
