HyperCard: SCSI Probe Interfere's with Command-Space Bar (7/92)

Article Created: 16 September 1991

Article Reviewed/Updated: 23 July 1992

TOPIC -----

The Command-Spacebar keystroke normally hides or displays the menu bar in HyperCard. If, instead, the cursor changes to a watch and the menu bar does not hide/display, the cause may be a Control Panel document in the System Folder called SCSI Probe.

DISCUSSION -----

SCSI Probe uses Command-Spacebar to mount hard drive volumes. To fix the problem, change the keyboard shortcut for SCSI Probe to something else. (You won't need to restart the computer.)
