HyperCard 1.2.1: Insufficient Memory when Printing

This article last reviewed: 23 August 1989

TOPIC ---

HyperCard chokes after I print around 140-150 of the 284 cards in a certain
stack. I'm using HyperCard 1.2.1 on a Macintosh II with 2MB of memory running
MultiFinder.

DISCUSSION ------------------------------------

This is probably an out-of-memory error, so try printing without MultiFinder
running. Here are some other options you should try (in order):

1) Compacting the stack immediately before printing.

2) Using HyperCard 1.2.2.

3) Write a script that sets the lockmessages and lockrecent properties to true,
   then go to each card of the stack and issue a Print Card menu command. This
   is the least-recommended solution, due to the time and trouble involved.
