## HyperCard 1.2.2: Can't Print More Than 127 Pages

This article last reviewed: 1 May 1990

TOPIC -----

I am having a problem printing from HyperCard v1.2.2. Specifically, it seems to be the "printing more than 127 pages" problem that others have noticed in earlier versions of HyperCard.

The "Now preparing page x..." counts up to 167 and down, printing pages 167 through 39, and then it terminates as if completed (167 - 39 = 128). I compacted the stack before printing, and I tried MultiFinder as well as Finder.

DISCUSSION -----

This is caused by a problem in HyperCard 1.2.2. As of May, 1990, there is no solution to this problem.
