HyperCard: Problem with CD-Audio XCMDs from Voyager (12/95)

Article Created: 7 February 1991
Article Reviewed/Updated: 22 December 1995

TOPIC ---

Some users, when they try to run their HyperCard 1.x stacks under HyperCard
2.0.v2, they find their previously working CD-Audio commands no longer
work.

DISCUSSION --

Apple and Voyager both sold CD-Audio XCMDs. They were both the same product as
Voyager licensed them from Apple. However, Voyager included ResCopy (the old
version) to install the externals. This caused a problem when the CD-Audio
externals are installed with the old version of ResCopy, the stack will not work
properly under HyperCard 2.x.

To fix the problem, re-install the XCMD using either ResEdit or Resource
Mover (found in the Power Tools stack).

All the development tools available from Apple are included with version 2.3 of
HyperCard. CD-Audio XCMDS are not part of the HyperCard 2.3 tools and are no
longer available from Apple. The Voyager company still offers the CD-Audio
XCMDs.
