HyperCard: Converting SuperCard Projects to HyperCard (3/93)

Article Created: 27 January 1993
Article Reviewed/Updated: 29 March 1993

TOPIC ---

Heizer Software has a utility program, called Homeward, for converting
SuperCard projects to HyperCard stacks.

DISCUSSION ---

Homeward performs about 70% of the conversion work. Projects with multiple
windows are no problem. Each window is translated into a new stack,
including the scripts and objects associated with each window. Graphics,
including color, are converted, as well as first-pass translation of
SuperTalk scripts. Color and irregular-shaped objects are handled with
XCMDs.

Some work will be required to refine the newly created HyperCard stacks.
To aid in this process, Homeward generates a detailed "Exception List,"
pin-pointing items that may require further attention. Many vendors offer
solutions for recreating SuperCard feature which are not directly supported
by Homeward, such as list objects and animations.

Contact Heizer Software for more information. To locate a vendor's address
and phone numbers, use the vendor's name as a search string.
