HyperCard:Importing Addresses 2.0 to Addresses 2.1 (7/92)

Article Created: 26 September 1991
Article Reviewed/Updated: 23 July 1992

TOPIC ---

The HyperCard 2.1 Address stack can't import data from the 2.0 Address
stack.

DISCUSSION --

The reason is that the returns in the 2.0 Notes field are never parsed out and
replaced with the "..." (ellipses, made with Option-semicolon keys) that the
import script is looking for.

So in the ImportTextFromNewStack handler, in the background of the 2.1 Addresses
stack, one line should be added:

```
  put bg fld "Notes" into theNotes -- notes field
  put SubstituteChar(return,"…", theNotes) into theNotes -- this is the new
line
  write theName & tab & theCompany & tab & theStreet & tab &...
```

This will solve the problem.
