HyperCard: Opening MacDraw 1.9.x Files (10/92)

```
Article Created: 15 May 1992
Article Reviewed/Updated: 30 October 1992

TOPIC -------------------------------------------------------------

Using HyperCard to open MacDraw 1.9.x documents in MacDraw Pro 1.0v1 does not
work.  (This is fixed in MacDraw Pro 1.5.)

DISCUSSION --------------------------------------------------------

This command should launch MacDraw Pro and open a MacDraw 1.9.x file named
MDdoc:

  Open MDdoc with MacDraw Pro

Instead, it opens a blank, untitled document.

This command works correctly for all other openable file types.  For example:

  Open MW2doc with MacDrawPro

opens a file named MW2doc into MacDraw Pro, even if this file is an EPSF, TIFF,
PICT, MacWrite II or any other openable file.
