## HyperCard: Power Tools and Palette Maker (5/94)

Article Created: 23 May 1994

TOPIC -----

I am using the Power Tools stack with HyperCard 2.2 to create a palette. I have added a background and some buttons, but when I use the palette, the buttons do not appear (they are covered by the background, which is a shape filled in). However, if I click on the spot where the button is supposed to be, it does what the button is supposed to do. How do I fix this?

DISCUSSION -----

When using Palette Maker, ALL buttons will appear as transparent rectangles in the final palette. This is explained in the help card of Palette Maker.
