HyperCard: Changing and Printing Card Headers (2/95)

Article Created: 8 February 1995

TOPIC -----

How can I add, change, or remove a header when I print a single card from my HyperCard stack?

DISCUSSION -----

The Print Card command in HyperCard gets its header information from the header text box in the Print Stack dialog box.

To Add, Change, or Remove a Header from a Card
=====

Step 1

Pull down the File Menu and choose Print Stack. The Print Stack dialog box will open.

Step 2

Type the desired header text in the text window at the bottom of the dialog box.

Step 3

Click the Print button. The Print dialog box will open.

Step 4

Since you do not actually want to print the whole stack, you only want to print a single card, click the Cancel button. The changes you made to the header text will be saved.

Step 5

Pull down the File Menu and choose Print Card. You will now see the header text that you entered in the Print Stack dialog box at the top of the card.

NOTE: If you click the Cancel button in the Print Stack dialog box instead of the Print button (Step 3), your changes to the header text will not be saved.
