## KanjiTalk: Printing to StyleWriter

Article Created: 9 January 1992

### Article Change History

-----  
09/22/92 - UPDATED

- To include information on Kanji TrueType.

### TOPIC -----

Can I print Kanji to a StyleWriter using a Macintosh Classic with 2MB or 4MB RAM, KanjiTalk system software, and a serial connection to a StyleWriter?

Specifically:

- 1) Can I print Kanji and Roman characters on the StyleWriter?
- 2) Will the quality be bitmapped (72 dpi) or TrueType (300+ dpi)?
- 3) Is this possible and/or practical on a 2MB Classic?

### DISCUSSION -----

- 1) Yes, you can print Kanji and Roman characters on the StyleWriter.
- 2) Without an outline font technology, such as Kanji TrueType, The output isn't pretty due to bitmap fonts (Adobe's ATM-J can help improve the output). Kanji TrueType, is also available in the U.S. through KanjiTalk authorized dealers.
- 3) A Macintosh Classic with 2MB RAM is fine for the current release of KanjiTalk, 6.0.7. However, you will need 4MB if you install Kanji TrueType or ATM-J.

For a list of authorized KanjiTalk dealers in the U. S, search the Tech Info Library under "KanjiTalk and dealers", or contact the Apple Dealer Location Operator at 800-538-9696.
