Chinese System Software File Encoding Method (7/93)

Article Created: 16 July 1993

TOPIC -----

I need to know what character encoding method is used for simplified Chinese in WorldScript. I'm setting up an office using Chinese system software and I'm trying to develop a standard software set. The two common encoding types are GB and Big 5. I need to know which one Apple uses, or if Apple developed it's own.

DISCUSSION -----

We were able to verify the character encoding methods used for Traditional and Simplified versions of Chinese System Software for WorldScript; they are BIG 5 and GB respectively. BIG 5 is used for Traditional Chinese system software, and GB used for Simplified Chinese system software. Copyright 1993, Apple Computer, Inc.
