Cyrillic Language Kit: Incorrect Keyboard Layouts (10/96)

Article Created: 10 September 1996

TOPIC --

I have the Cyrillic Language Kit installed on my computer, and I think that that
the keyboard layout cards (which were included with this Language Kit) may have
an error on them. Instead of the typical 10 keys located between the two Shift
keys, these layout cards display 11 keys. It appears that there is an extra key
located between the Z key and the left Shift key. Because of this confusion, I
am not sure which key the corresponding character is actually mapped to.

DISCUSSION --

The character on this key (which varies with each layout) is actually mapped to
the key to the left of the numeral 1 key in the top row of the keyboard. The
keyboard layout cards incorrectly list this key has having no character mapped
to it.
