Language Kits: Language Kit Extension (2/95)

Article Created: 13 April 1993

Article Reviewed/Updated: 14 February 1995

TOPIC -----

What is the Language Kit Extension?

DISCUSSION -----

The Language Kits come with the Language Kit extension. This extension provides system support for the integration of scripts (writing systems, or alphabets) other than the primary script. It provides a mechanism for applications to show the menu bar, title bar name, and file names in the Standard File dialog.

Specifically, for the Japanese Language Kit, this extension allows Japanese text to show up in Japanese application menu bar, the document title bar, and the Standard File Open and Save dialogs. The Language Kit Extension uses the Japanese Support extension to provide the proper user interface in Japanese. The same is true of the Chinese Language Kit.

Note:

In the standard Open and Save file dialogs, the file names shown in the scrolling field and text box will show in Japanese only if a Japanese font is selected (in Chinese if a Chinese font is selected) in the Views control panel. Otherwise, the text will be unreadable.

Article Change History:

15 Feb 1995 - Made article more general for all language kits.
