Macintosh: Korean-Language Word Processors

This article last reviewed: 4 January 1990

TOPIC -----

Do you know of a Korean-language word processor?

DISCUSSION -----

The Apple distributor in Korea, Elex Computer, has developed the HangulTalk 6.0.2 with Apple Far East. It has full Korean-language support and Hangul PostScript printing.

For word processing, Elex Computer has worked with Paragon Concepts to localize the Nisus word processor. The Korean version has full script-manager support plus in-line Hangul input. Besides Nisus, a Korean version of Quark XPress is also available.

Please contact Elex Computer for details. For more details, search the Tech Info Library under "Elex."
