Language Kits: Inline Support (2/95)

Article Created: 13 April 1993
Article Reviewed/Updated: 15 February 1995

TOPIC ---

When inputting Japanese or Chinese text into a Japanese or Chinese TeachText
document or into the Finder (including control panels) using the Japanese or
Chinese Language Kit the text does not show up inline like in KanjiTalk 7. Why
not?

DISCUSSION --

The inline text feature is not available in the Japanese or Chinese Language
Kits because the Text Services Manager Text Edit (TSMTE) patches are not
included with the Kits. Thus, inline text support is not available for
TeachText, the Finder, or any other application that relies on Text Edit system
routine for text input.

However, Japanese or Chinese text can still be input using the standard input
window. In addition, applications that implement their own inline code or
utilize the Text Services Manager will provide inline support under the Japanese
or Chinese Language Kits.
