TOPIC ---

What is error ID=51? I get a system bomb when I try to log on to my
Ethernet network.

DISCUSSION --

That error is: "Unserviceable slot interrupt."

In general, this type of error is caused by a corrupt operating system,
Ethernet driver, or a software incompatibility between any of these and
INITs or CDEVs. Try trashing and re-installing the operating system and
Ethernet drivers. If that fails to solve the problem, try removing all
unnecessary third-party INITs and CDEVs. If the system works at this point,
re-install them one at a time and restart each time to find the culprit.
