## Macintosh: Error -39 End Of File Meaning (10/94)

Article Created: 14 May 1991

Article Reviewed/Updated: 26 October 1994

TOPIC -----

I am getting a -39 error when I try to open a document.

What does the error mean and what might be the problem?

DISCUSSION -----

The -39 error is an "End Of File" error. The most likely cause of the error is a corrupt data file. The only real fix is to restore the data file from a backup or recreate it if there isn't a good backup available.

Article Change History:

26 Oct 1994 - Clarified explanation of error.
