Macintosh: Troubleshooting ID=10 Trap Error Bombs (4/94)

```
Article Created: 14 May 1991
Article Reviewed/Updated: 5 April 1994

TOPIC --------------------------------------------------------------

I am repeatedly getting the system bomb "ID=10" on my Macintosh.  What does
it mean?

DISCUSSION ---------------------------------------------------------

ID=10 is a line 1111 trap error caused by software problems.  The first
thing that you need to do is:

1) Remove all extensions (INITs) and control panels from the System Folder
   and restart.

2) If you're no longer getting ID bombs, replace the extensions and control
   panels, one at a time, until you get the error again.  The last one put
   in is likely the cause of the crashes.

If you are still getting the crashes after removing everything, remove the
entire System Folder and reinstall a new copy form your System disks using
the Installer.  If you still get the bombs at this point, determine whether
this always happens when using a particular application?  If so, replace
that application.  Also, verify that your application is the most current
version available and fully compatible with your Macintosh model.
