MacX: Bad STARTFONT Statement Error Caused by Lower Case Type

Article Created: 27 April 1991

TOPIC ---

I cannot seem to get MacX 1.0.1 to compile BDF fonts properly. MacX keeps
converting the fonts into 0 byte files and complains about a "Bad STARTFONT
statement".

DISCUSSION --

We tried compiling one of the sample BDF files under MacX 1.0.1 without any
problems. The first line in the BDF file must be ALL UPPER CASE, such as
"STARTFONT 2.1". Otherwise, you will get the "Bad STARTFONT statement"
message.
