Article Last Updated:

TOPIC -----

I am trying to display an Xclient that does not accept the -display option.  
Is there any way to display the client on a color monitor?

DISCUSSION -----

Since the client is reading the DISPLAY variable from the environment, an  
easy way around this is to set the environment as part of the command.

For example:

```
env DISPLAY=hostname:0.3 /usr/bin/X11/xterm.
```
