MacX 1.5 and 24 bit Color (4/96)

Article Created: 9 May 1994

Article Reviewed/Updated: 8 April 1996

TOPIC -----

I want to do 24 bit color image editing from a Sun Workstation using MacX over an Ethernet connection. It is my understanding that the current version of MacX does not support 24 bit color, is this true?

DISCUSSION -----

You are correct. MacX 1.5, supports up to 8 bit color graphic images (256 colors). The X11 R5 server protocols can support 24 bit color graphic images, however, Apple's implementation of MacX 1.5, an X11 R5 based server, still operates at 8 bit graphic mode because some of the graphic code was from MacX 1.2.
