Macintosh Tutorial: Read Me (6/96)

Article Created: 28 June 1996

TOPIC ---

This article contains the ReadMe file for Macintosh Tutorial.

DISCUSSION --

Macintosh Tutorial is a training program for new Macintosh users to learn how to use a Macintosh. It is the replacement for Macintosh Basics and requires System 7.5 and Apple Guide.

Installing and Configuring Macintosh Tutorial for 7.5
==

Install Macintosh Tutorial following these steps:

* Drag the Tutorial Items folder into the extensions folder of your 7.5 System Folder. (Do not rename the folder).
* Drag the Macintosh Tutorial file into the extensions folder of your 7.5 System Folder. (Do not drag it into the Tutorial Items folder).
* Restart your Macintosh.

To view the Tutorial, select Macintosh Tutorial from the Help menu.

Macintosh Tutorial is in two parts:
The first part teaches different pointing skills - mouse, trackball and trackpad - depending on the configuration that has been loaded in the Tutorial Items folder.

You can examine each pointing device path by moving the other pointing devices skills sections out of the Tutorial Items folder. For example, to show the Mouse Skills section, drag Trackpad Skill and Trackball skills out of the Tutorial Items folder. And if you'd like to view the Trackpad Skills, drag the other two out of the folder (replacing the Trackpad Skills section, of course) If you have a PowerBook Duo, leave both the Mouse and Trackball Skills sections in the folder and when you're docked you will see Mouse Skills and undocked, Trackball Skills. If you leave all three Skills files in the folder, the tutorial wil default to the Trackball Skills section.

The second part is an Apple Guide database and leads you through several tasks while you are in the Finder.
