AppleShare Works Across Ungermann-Bass

This article last reviewed: 5 April 1988

AppleShare executes properly across the Ungermann-Bass Multiport
Transceiver.

When a Macintosh II is connected to the U-B MPT via thick Ethernet, it
can communicate with a Macintosh Plus/Kinetics combination at another
thicknet connection. This is true regardless of which station is the
server.

(NOTE: TOPS does NOT work in this situation.)
