AppleShare 3.0: Access Privileges for a User Folder

```
Article Created: 28 October 1992

TOPIC -----------------------------------------------------------

A client on an AppleShare 3.0 server wants to set up a folder, and then set
up access privileges without involving the server administrator.  How do
they do that?

DISCUSSION ------------------------------------------------------

Follow these steps:

1) Create a new folder on the server.
2) Select the folder.
3) Under System 7: Select Sharing under the File menu.
4) Under System 6: Select Get Privileges under the File menu.

This brings up a dialog box which will allow you to set up access
privileges for that folder.
