Macintosh: Connecting With the Unisys A4FX Mainframe

This article last reviewed: 12 March 1989

If you need to upload and download files between a Macintosh and an Unisys A4FX mainframe, consider Avenue Software's Contact product. If the connection is asynchronous, you only need the software. If not, you will need their TDI/RS-232 converter, too. Multiple station connectors are available at a lower cost per workstation price. (Avenue Software specializes in terminal emulator and data transfer software for transferring files to/from Unisys mainframes.) For more details, search the Tech Info Library under "Avenue Software".
