Data Conversion Services for Mac-to-Third Party File Transfer

This article last reviewed: 21 July 1989

TOPIC -----

A customer has a lot of IBM DisplayWriters (model 6580). They need to transfer the files from the DisplayWriters to the Macintosh. The DisplayWriters are connected as 3270 terminals to the mainframe, but they do not have any uploading or downloading capability (for security reasons). Is there any solution for transferring the files from the DisplayWriters to the Macintosh systems? The DisplayWriter uses 8-inch floppy disks.

DISCUSSION -----

A data conversion service can provide the answer. We are aware of three such services that can handle the DisplayWriters' 8-inch disk conversion to the Macintosh format:

- Pivar Computing Services, Inc.
- Convert-It!
- Tropus, Inc.

For more details, search the Tech Info Library under any of these company names.
