Macintosh-to-Amiga Amiga Graphics Transfer

This article last reviewed: 4 June 1990

TOPIC ---

I want to convert Amiga screens to the Macintosh. I don't write Macintosh
programs, but I want to use the Macintosh with PageMaker to document Amiga the
games.

DISCUSSION --

GIF, an interchange format designed by CompuServe, is one of the most-used file
formats for moving graphic images between different computer platforms.
Various utilities are available in both the Macintosh and Amiga public domain
arenas for converting standard graphic file formats to the GIF interchange
format. Once in this format, just transfer the GIF files to the Macintosh.

On the Macintosh side, there is a utility called Giffer that reads a GIF file
and writes a PICT file. The PICT file can then be placed in the PageMaker
documents.
