Converting Various Graphic Files to Macintosh PICT Files

Article Created: 4 June 1990
Article Last Reviewed: 27 September 1991
Article Last Updated: 27 September 1991

TOPIC ---

I want to transfer DigiPaint (HAM format) and Professional Paint (some type of
encapsulated PostScript) files from an Amiga 2500 series computer to the
Macintosh. (I don't think they care about the format.) Do you have any
suggestions?

DISCUSSION --

"PICTure This" from FGM Software is an application and DA that converts a wide
variety of graphic file formats to PICT and PICT2 formats. Professional Paint
should also provide the Amiga IFF format. FGM has indicated that Amiga EPSF
files are different than Macintosh EPSF files, and they do not support the
Amiga format at this time.

File Formats

Targa 8, 16, 24, 32
CGM
PCX (all varieties)
TIFF (all varieties)
LetraSet RIFF
Amiga IFF (except the 24 bit)
Amiga HAM
RIFF
X11 Bitmaps
Dr. Halo Cut (with palette support)
SunRaster Images (B&W and 8 bit)
CompuServe GIF
CompuServe RLE
GEM IMG (PC and Atari)
Lotus PIC
Lotus BIT
Lotus RLE
MacPaint
Macintosh EPSF (due to variations, most other platforms are not supported)
