MacWorkStation: A Pseudo-TLPM Workaround

This article last reviewed: 13 October 1989

TOPIC ---

Is there a plan to provide a TLPM to run MacWorkStation over the TokenTalk NB
Card?

DISCUSSION --

Providing a TLPM (Transport Layer Protocol Module) to let MacWorkStation run
over Token Ring is under investigation. There is no timeframe for implementing
it.

As of September, 1989, you can use MacWorkStation over the Apple TokenTalk NB
Card via ADSP (Apple Data Stream Protocol), as if you created a pseudo host
application on another Macintosh.
