MacTerminal 2.0: Issuing Breaks

A Macintosh Plus can run MacTerminal 2.0, but the new Macintosh Plus keyboard
cannot produce a "Break" in the same way.

Among others, users of Northern Telecom SL-1 PBX are affected by this change.

To work around the problem:

  1. Use the 'Option' key on the new Macintosh Plus keyboard.

        a. Break (0.2 sec): Option, Enter

        b. Long Break (2 sec): Option, Shift, Enter

  2. For short Break (0.2 sec), use the Apple Cluster Controller's "Attn"
     on the Pull-Down-Keypad.

  3. When using the OLD keyboard: use the Enter key on the Keyboard only.
     (NOT on the Numeric Keypad):

        a. 3278 mode: Long Break (2 sec): Shift, Enter

        b. VT-100 mode:
             1. Break (0.2 sec): Enter
             2. Long Break (2 sec): Shift, Enter
