MacTerminal: MacroMaker for Sending Escape Sequences

This article last reviewed: 29 June 1988

Some users want to send application commands with the keypad in VT100 mode. However, when using MTMOD, the keypad sends only the character code for the number, while showing the correct setting on the screen. For example, when you press the "9" on the keypad, MacTerminal sends "9" instead of Esc,"O","y".

To send an escape sequence instead of a number use MacroMaker, part of the recently released System Software 6.0. MacroMaker can send the escape sequence correctly. You can redefine the "9" on the keypad, because MacroMaker understands the keypad as a separate set of keys.

Note: MTMOD does not work with later versions of MacTerminal.
