Kermit File Transfer Protocol

This article last reviewed: 28 September 1987

Columbia University created the Kermit protocol for mainframe-to-microcomputer file transfers. Red Ryder 9.4, a "shareware" communications package, supports the Kermit protocol and is available on most public bulletin board systems. Another software package, Mac240 from White Pine Software, supports VT240, VT220, VT100, and the Kermit protocol.

For more information on how the Kermit protocol is implemented, see "Kermit: A File Transfer Protocol" by Frank da Cruz (Digital Press,ISBN 0-932376-88-6). Or contact Columbia University Kermit distribution at (212) 280-3703. Copyright 1990 Apple Computer, Inc.
