Obtaining TCP/IP and PC/IP Protocols for Macintosh and IBM PC

This article last reviewed: 14 April 1988

Some users utilizing NCSA Telnet are interested in running TCP/IP protocols across all their PCs, and have asked if there is a compatible IP version for the IBM PC side.

NCSA Telnet was developed by the National Center for Supercomputer Applications; they have created software for both the Macintosh and the IBM PC.

The IBM software is known as PC/IP. You may contact the Center for more information concerning this package.

For more information, search under: "NCSA".
