Differences Between AppleTalk v58.1.5 and v58.1.6 (1/96)

Article Created: 17 October 1995
Article Reviewed/Updated: 12 January 1996

TOPIC ---

What are the changes made from AppleTalk v58.1.5, distributed on the Network
Software Installer (NSI) 1.5.1, to AppleTalk v58.1.6, shipped on the PowerBook
5300 series computers?

DISCUSSION --

The change to AppleTalk v58.1.6 was needed to implement built-in infrared
technology (IRTalk). If the version number for AppleTalk had not been revised
with the PowerBook 5300 Series computers, then running NSI 1.5.1 would over
write the IRTalk changes. So by changing AppleTalk to v58.1.6, even if a user
does run NSI 1.5.1, the AppleTalk resources will not be written over because the
version pre-installed on the PowerBook is newer than the one on the NSI 1.5.1
disk.
