Apple Remote Access: Multiple Clients (11/94)

Article Created: 29 October 1991
Article Reviewed/Updated: 11 November 1994

TOPIC --

Can AppleTalk Remote be run on a Macintosh II computer that accepts several
inputs from various modems, maybe with some NuBus boards?

DISCUSSION ---

The 1.x version of AppleTalk Remote Access was not designed for this capability,
and we don't know of any way of modifying it for this purpose.

The Apple Remote Access 2.0.1 Multi Port Server will allow multiple clients to
log in however. Search the Tech Info Library on the Multi Port Server for
additional information on that product.
