This installer works on either System 6 or System 7 Macintosh computers.

The Network Software Installer v.1.4.1 process correctly handles the installation of AppleTalk v58.1.1 and related software components on Macintosh 840AVs and Centris 660AVs..

Restrictions

This software should not be installed with AppleTalk Internet Router and AppleShare client on a Macintosh with only 1 Megabyte of memory.

If this release of the Network Software Installer is being used in conjunction with an Apple Internet Router v. 3.0 Installer, Router 3.0 MUST be installed first. This will ensure that the Router installation does not overwrite the newer AppleTalk software contained on NSI 1.4.1.

Release notes for each item follows

-
- AppleTalk version 58.1.1
Changes were made to the workstation's Best Router Table maintenance when talking to Routers that use a zero hop count.
 - Ethernet for Ethernet NB Twisted Pair Card
Support was added for the 1.0.7 Ethernet driver for the Ethernet NB Twisted Pair card.
 - EtherTalk for EtherTalk NB
Fixed a slowdown that occurred with EtherTalk NB cards while using DECNet.
 - EtherTalk and TokenTalk version 2.5.5
A change was made to the AMT table maintenance for supporting Router 3.0 (which uses 0 hop counts).
