Apple Remote Access: v1.0 Client Access to v2.0 Servers (1/97)

Article Created: 9 September 1994
Article Reviewed/Updated 20 January 1997

TOPIC ---

Is there a way to dial into, and gain access to an Apple Remote Access 2.0
server from the 1.x client?

DISCUSSION --

A software patch is now available that lets customers using Apple Remote Access
(ARA) server software 2.0.1 accept calls from ARA 1.0 clients. The patch is
available immediately at no charge to ARA customers in the U.S. and enables both
Apple Remote Access Personal and MultiPort Servers (version 2.0.x) to accept
calls from ARA 1.0 clients.

The server software does not provide any additional enhancements beyond enabling
Version 1.0 clients to access Version 2.0.x servers nor does it add ARA 2.0
functionality to the ARA 1.0 client. If you do not require connections from ARA
1.0 clients to 2.0.x servers you do not need to update your remote access server
software.

The Apple Remote Access Update is available from user groups and from the
following online locations:

• On the Internet at the following sites:
  – Worldwide Web: <http://www.info.apple.com/swupdates>
  – ftp: <ftp://ftp.info.apple.com/>
• On America Online, use keyword: applecomputer

• On CompuServe, use GO: APLSUP

Article Change History:
20 Jan 1997 - Updated online references.
22 Feb 1995 - Updated version numbers.
07 Feb 1995 - Added keyword and made several corrections.
